

29-6-26

I am Bronwynne Hutchings
I own 1233, 1235 & 1249 Kaipahi Road
I wish to express my concerns
about M&K Quarry Plant Ltd
M&K Recycling Solutions Ltd.

If this is to go ahead there
needs to be very strict conditions
and there will be very capable ways
that these conditions can be fully
monitored.

My concerns.

Noise From trucks, the processing
machinery, any compacting machinery

Dust they say they water it down
but it might have low contaminants

Leaching into underground water
ways, which are many that all
head to the Waikato River.
This water travels on past
a water pumping station that
provides water for the community.

Tomoes As the Cambridge Council
found out years ago in the 70s
when they put in sewage ponds.
The contents of the ponds would
disappear over night. In the
end the ponds had to be

lined with heavy lining to stop this happening.

Flies with the firm not been able to deal with the recycling already there the flies haven't disappeared in the winter. I'm still even getting blow flies which I only usually get in the spring for a short time in early spring. Even spraying the outside of house hasn't helped.

The future

Recently my properties have been included in the town boundaries. Is this really suitable to place this business here. Over the other side of the river there are new subdivisions been created they have concerns too.

I was told last Sunday at a meeting I attended "The owners have been to Australia where 1 city has 3 of these plants working."

Perhaps the council should send one of their suitable staff so a more informed decision could be made whether this should all go ahead.

Sincerely
